

8/12 Rows Rice Direct Seeding Machine for Kubota Yanmar Lovol Rice Transplanter

YongXiang Industry Park, No.2 Development Rd.
Anlu City, Hubei Province, China
Hubei 432600
China

Phone: +8613128804218

Save time and labor. Direct seeding of rice is direct sowing, just like wheat, eliminating the process of raising seedlings, and transplanting, and there is no need to occupy rice fields for raising seedlings. Direct seeding of rice does not have the process of regreening and seedling injury, so the growth period is shorter than that of transplanted rice in the same period. Direct seeding of rice is simple and convenient, which is conducive to large-scale development.
